Introduction of Vay

Vay Redefines Car-Sharing by Bridging Human Control and Automation

Four differentiators

Vay's B2C mobility solution: Targeting urban residents and "No-Car" consumers

Target Customer

	Gains 	Pains 	Vay's Value Proposition 
Urban Residents 	1 Flexibility	➤ Parking hassle Waiting for a driver	➤ Easy: Car comes to you, eliminating parking and waiting
"No-Car" Consumers 	2 Economy	➤ High costs of Taxi & Rental	➤ Affordable: ~60% ¹ cheaper than riding, without ownership costs.
	3 Sustainability	➤ Fuel emissions Urban congestion	➤ Sustainable: All-electric fleet and efficient operations for cleaner cities.

Vay's competitive landscape: Geographical and Financial Leverage in a Fragmented Market

Competitive Landscape

	Traditional car-sharing		Autonomous driving	Teledriving		
Brand	Flinkster	Free2Move	Waymo	Halo	Elmo	Vay
						
Service Model	• Station-based, round-trip, optimized for rail-to-car continuity²⁴	• Free-floating car sharing; find/unlock via app and self-drive²⁶	• Driverless robotaxi passenger service (geo-fenced).²⁹	• Teledriving delivers and retrieves cars driver-out.³⁰	• Teledriving delivers and retrieves cars driver-out.³⁴ • Mix of per-minute and weekly/monthly packages with included kilometers	• Teledriving delivers and retrieves cars driver-out • Focused on short-distance trips (under 12 hours), calculated by minute
Tech	• Human-driven (no autonomy)²⁴	• Human-driven (no autonomy).	• Level 4 AV (geo-fenced, no safety driver)²⁹	• Teleoperation (remote driver)³¹	• Teleoperation (remote driver)	• Teleoperation (remote driver)
Operating Countries	• Operates nationwide in Germany²⁵	• Operating in 16 cities in France, Spain, U.S., Italy, Austria, Germany, Netherlands²⁶	• Operating in LA, SF Peninsula, and Phoenix²⁷	• Commercialized in Las Vegas³²	• operates more than 100 electric cars in Estonia. (city-scale fleet) • Road-legal & fielded in car-sharing since 2022 in Estonia, Finland.^{35 36}	• Commercial service in Las Vegas³⁸ • Hamburg “driver-out” demo credentials (First in Europe)^{39 40} • Commercial pilot: Partnership with Poppy Mobility and Ush, remote-driven rental deliveries.⁴¹
Status (2025)	• marketed to companies, teams, freelancers²⁴	• Active globally with different kinds of car-sharing services²⁶	• Authorized by CPUC to expand • Waymo for Business launched Sept 2025²⁸	• Driverless delivery live (downtown), 2023³³	• Cooperation with Nokia to ensure a high-quality network.³⁷ • The service is set to launch in Heidelberg by 2025 under the new regulation.³⁵	• Early regulatory engagement → faster approval potential (StV FernLV) • €34m investment from the European Investment Bank (EIB). describes a plan to deploy up to 1,100 EVs across German cities (2024–2027).⁴³ • Telekom and Ericsson has partnered with Vay for L4S testing since October 2022.⁴²

2

Vertical Expansion Opportunities

There are three key Verticals which Vay should tackle to gain more traction in their B2B sector

B2B Verticals

Luxury OEMs

Equip luxury cars with Vay's tele-driving technology.

Airport Logistics

Vay's tele-driver operates airport ground supporting equipment.

Car Sharing

Vay's tele-driver delivers car to the user and retrieves it post-trip.

Leveraging Vay's core technology to help luxury OEMs boost brand differentiation and elevate their customer's satisfaction

B2B Verticals

USE CASE	VERTICAL FIT	CHALLENGES
Car Sharing powered by Vay <i>Luxury OEMs today face:</i> • Differentiation Need • Demand mobility-as-a service <i>What Vay delivers:</i> 1. Unique telechauffeur technology 2. Premium user experience 3. Recurring & scalable revenue model <i>Results:</i> • Enhanced brand differentiation • Improved customer convenience & safety	Why this B2B Vertical  Strong-Brand Partnerships  High-Margin Market  Huge Scalability Potential  Strategic Data Leverage	1 Technical Integration 2 Regulatory & Liability 3 Operational Excellence

B2B Luxury OEM's TAM to SOM demonstrates a credible path to ~€34M annual run rate within three to five years

B2B Verticals

Source: 47. Statista. (n.d.). *Luxury Cars – Europe*; 48. Statista. (n.d.-b). *Luxury Cars - Germany*

There are three key Verticals which Vay should tackle to gain more traction in their B2B sector

B2B Verticals

Luxury OEMs

Equip luxury cars with Vay's tele-driving technology.

Airport Logistics

Vay's tele-driver operates airport ground supporting equipment.

Car Sharing

Vay's tele-driver delivers car to the user and retrieves it post-trip.

Leveraging Vay's core technology to transform airport logistics operations into safer, leaner, and smarter systems

B2B Verticals

USE CASE	VERTICAL FIT	CHALLENGES
Airport Logistics powered by Vay Airport logistics today face: • Driver shortage for operations⁴⁶ • Security Checks Limit Operational Flexibility • Inefficient vehicle movements What Vay Delivers: 1. Remote Airside Driving for GSE Fleets 2. Real-time task dispatching 3. 24/7 vehicle repositioning without shift labor Results: • Reduced reliance on manual drivers • Improved operational continuity	Why this B2B Vertical  Pre-Mapped, Highly Structured Driving Routes  Stable and Predictable Task Volumes  Legally Feasible in Closed Campus Zone  Perfect Fit for Vay's Centralized Model	1 Tech and Operational Complexity 2 Regulation Barriers 3 Infrastructure Limitations

Europe B2B airport logistics TAM to SOM demonstrates a credible path to ~€16.4M annual run rate within three years

B2B Verticals

There are three key Verticals which Vay should tackle to gain more traction in their B2B sector

B2B Verticals

Luxury OEMs

Equip luxury cars with Vay's tele-driving technology.

Airport Logistics

Vay's tele-driver operates airport ground supporting equipment.

Car Sharing

Vay's tele-driver delivers car to the user and retrieves it post-trip.

Leveraging Vay's core technology to have B2B partnership with car sharing companies

B2B Verticals

Source: 1. (Vidon, 2024); 2. (Hoffmann & Prause, 2023);

Europe B2B car sharing TAM to SOM demonstrates a credible path to ~€18.7M annual run rate within three years

B2B Verticals

3

B2B Expansion and Partnership Plan

Vay's Strategic Focus: Car-Sharing as the Launchpad for European Teledriving Growth

Five Enablers

1 Verified Market Scale

- The European car-sharing fleet reached ~**120,000** vehicles in 2024, with **14%** increase by years⁹
- Germany market: **45,400** shared vehicles across **1,393** municipalities.⁹

2 Solvable Operational Pain Point

- According to a bcs analysis :**VEHICLE RELOCATION** as a key operational challenge for most German car-sharing providers

3 Partner Ecosystem in Place

- Vay builds with **Peugeot (Stellantis)** to test teledriving technology on E-308 and light-commercial vehicles.⁵
- Existing API infrastructure enables white-label integration.

4 Proven Pilot and Capital Support

- Vay × Poppy × Ush launched Europe's first commercial teledriving car-sharing service in Antwerp, integrating remote operation into Poppy's **2,300-**vehicle fleet.²³
- The European Investment Bank (EIB) granted **€34 million** to Vay GmbH for the expansion of teledriven car-sharing in Europe.²⁰

5 Regulatory Green Light

- Germany's **StVFernLV** regulation, effective 01/12/2025⁴

Market Readiness & Profitability Potential

Validation & Execution Readiness

Partnering with regional Car-Sharing players enables faster market entry and local regulatory advantage

Leading Industry Players

Source: 1. (Vidon, 2024); 9. (BCS Bundesverband Carsharing E.V., 2025);

Partnership with Cambio strengthens Vay's position in underserved cities and accelerates entry into new markets

Company Partnership

Company Overview¹⁰

- **Revenue 2024:** €66.5 million
- **Customers:** over 150,000
- **Vehicles:** 2,700+
- **Cities:** 48

Regional Presence

- Active in **Germany** and **Belgium**
- Key markets: urban regions such as **Bremen, Cologne, Hamburg, Aachen, and Brussels**

Key Highlights

- Station-based model
- “Blue Angel” environmental label
- Each vehicle replaces an average of eleven private cars
- 25 years of experience in the car sharing market

1. Strong Presence in Underserved Cities¹²

2. Teledriving Solves Cambio's Core Operational Challenge - vehicle relocation and delivery

3. Strong Government and Regulatory Advantage¹⁷

4. Ideal Fit for Car-Free Urban Zones¹³

5. Gateway to a Broader Mobility Network¹⁵

White Label Partnership with Cambio empowers Vay to achieve fast revenue growth & scalable low-risk B2B expansion

Partnership Model

Phased execution plan enables Vay to scale teledriving with Cambio from pilot to nationwide deployment

3-Year Execution Roadmap

	Year 1 – Pilot 	Year 2 – Expanding Operations 	Year 3 – Scaling Nation wide 
 Description	Pilot launch in Aachen to test teledriving integration ⁵⁰	Roll out to three additional cities such as Bremen ⁵¹ , Bonn ⁵² , and Düsseldorf ⁵³	Expand to more than ten German cities within Cambio's network
 Milestones & KPIs	- Secure national and regional regulatory approval - Equip 40 EVs with Vay technology	- Grow the fleet to 300 vehicles - Open one regional TeleOps centers - Train 12-20 new tele-drivers - Reach point of breakeven	- Exceed 1,000 teledriven vehicles - Secure multi-region regulatory approval
 Organizational implications	Form joint Vay-Cambio pilot team	- Establish a dedicated B2B Operations Unit - Set up first TeleOps center (Aachen/Berlin)	- Full tech & platform integration - Establish Key Account Management team for Cambio partnership
 CapEx focus	Vehicle retrofits	Expansion of TeleOps centers	Expansion of TeleOps centers
 OpEx focus	Pilot staff and training	- Driver training - Hire staff for TeleOps center	Manage multi-city operations

Source: 50. (Stadt Aachen, 2025); 51. (Innenstadtentwicklung Bremen, 2022); 52. (City of Bonn, 2025); 53. (Esch, 2025) ;

Cambio partnership will generate €~10M in revenue over the first 3 years

3-Year Financial Estimation

	2025/2026	2027	2028
# Vehicles equipped	40	300	1300
Trips per vehicle per week	7	12	15
Average distance(km) per trip	3	5	6
Average revenue per km	0,90 €	1,10 €	1,20 €
Fixed technology licencing fee per vehicle	800,00 €	900,00 €	900,00 €
Cities in operation	1	4	10

	2025/2026	2027	2028
# Teledrivers	2	11	40
Average hourly cost per teledriver	18,00 €	19,00 €	21,00 €
Tele-driver utilization (hours/week)	40	40	40
Hardware setup costs per vehicle (sensors, cameras,...)	1.300,00 €	1.100,00 €	1.000,00 €
Hardware Maintenance per vehicle	80,00 €	90,00 €	100,00 €

	2025/2026	2027	2028
Revenue			
Variable Usage Revenue	39.312,00 €	1.029.600,00 €	7.300.800,00 €
Fixed Licensing Revenue	32.000,00 €	270.000,00 €	1.170.000,00 €
Data services (Analytics)	2.000,00 €	15.000,00 €	65.000,00 €
Total Revenue	73.312,00 €	1.314.600,00 €	8.535.800,00 €

Expenses			
Payroll expenses	74.880,00 €	434.720,00 €	1.747.200,00 €
Connectivity Overhead	3.200,00 €	24.000,00 €	104.000,00 €
Hardware costs	52.000,00 €	286.000,00 €	1.000.000,00 €
Hardware maintenance costs	3.200,00 €	27.000,00 €	130.000,00 €
Regulatory & Insurance Costs	4.800,00 €	30.000,00 €	117.000,00 €
Platform maintenance & cloud services	20.000,00 €	30.000,00 €	80.000,00 €
General admin costs	7.331,20 €	131.460,00 €	853.580,00 €
Total Expenses	165.411,20 €	963.180,00 €	4.031.780,00 €

Scalable Profit Engine — €4M+ by Year 3 and rapidly growing

3-Year Financial Estimation

	2025/2026	2027	2028
Profit Metrics			
Gross Profit	-92.099 €	351.420 €	4.504.020 €
Profit Margin (%)	-126%	27%	53%

Year 1	Year 2	Year 3
Small pilot loss due to setup costs and low volume	Reaching profitability with a larger fleet and 11 tele-drivers fully utilized	National rollout delivers scale effects and ~53% profit margin

By 2028, the Cambio partnership will generate revenue equal to about **21% of Vay's B2C business.**

Three Core Synergies Enabling Scalable and Efficient Growth in Vay's Carsharing Expansion Strategy

4

Appendix

Vay is 68% cheaper than Uber

Calculation in detail

Service Provider	Pricing Model	Formula	Calculation
Vay	Time-based only	Time * Fees/Minute	10 minutes * \$0.35/minute+2 minutes * \$0.05/minute= \$3.60
Uber	Distance + Time + Waiting	Base fare + Distance fee + Time Fee + Waiting time fee	5 km * €1.50/km+10 minutes * €0.14/minute+2 minutes * €0.26/minute= €11.32

Key Information	Content	Definition
Key Data	€1.9 ⁴⁹	Base Fare for Uber
	€0.14 ⁴⁹	Per Minute for Uber
	€1.50 ⁴⁹	Per Kilometer for Uber
	€0.26 ⁴⁹	Additional wait time charges for Uber. If the driver has waited 2 minute(s): up to €0.26 per minute, depending on how busy it is.
Key Assumption	~€0.4 ⁵⁰	Per Minute driving for Vay
	5km	Total kilometers
	10mins	Time for driving
	2mins	Time for waiting

Source: 49. Uber Estimate - Get a price estimate in your city ; 50: Vay's APP

Vertical 1: Luxury OEMs

Calculations in detail

Market	Formula	Calculation
TAM	luxury car revenue EU * Charge%	TAM= 8 Billion * 8.5%= 680 Million
SAM	luxury car revenue DE * Charge%	SAM= 4 Billion * 8.5%= 340 Million
SOM	luxury car revenue DE * Charge%*10%	SOM=4 Billion * 8.5%*10%= 34 Million

Key Information	Content	Definition
Key	8 billion ⁴⁷	revenue of luxury cars in 2028 in Europe
Data	4 billion ⁴⁸	revenue of luxury cars in 2028 in German
Key Assumption	8.5% (avg of %~10% as First year fee)	Charge 6~8% of the vehicle's retail price in the first year and 1~2% in subsequent years. This pricing structure covers costs, ensures a return on investment of over 30%, and still leaves OEM partners with a 30–40% brand markup margin.
	10%	Within the next 1~3. years, Vay could capture 10% of the Germany luxury cars B2B market

Luxury Cars Example: Audi A8, BMW 7 Series, Jaguar XJ, Mercedes-Benz S-Class, Porsche Panamera.

Source: 47. Statista. (n.d.). *Luxury Cars – Europe*; 48. Statista. (n.d.-b). *Luxury Cars - Germany*

Vertical 2: Airport Logistics

Calculations in detail

Market		Formula	Calculation
TAM		EU airside GSE fleet ($\approx 50\text{ k}$) $\times$ €10,950 / vehicle / year	TAM = $50,000 \times \text{€}10,950 = \text{€}547.5\text{ Million / year}$
SAM		GSE fleet (DE + FR + ES $\approx 10\text{ k}$) $\times$ €10,950 / vehicle / year	SAM = $10,000 \times \text{€}10,950 = \text{€}109.5\text{ Million / year}$
SOM		Target fleet (15–20 k) $\times$ 5–10 % penetration $\times$ €10,950 / vehicle / year	SOM $\approx 750\text{--}2,000$ vehicles €8.2 M – €21.9 M / year (mid $\approx \text{€}16.4\text{ M}$)

Key Information		Content	Definition
Key Data	Key	50 k	Airport Ground Supporting Equipment (Vehicles) (EU airside GSE fleet) ⁴⁴
	Data	10 k	Airport Ground Supporting Equipment (Vehicles) (DE + FR + ES subset) ⁴⁴
		5 – 10 % within 3 years	Penetration Rate could reach to
Key Assumption		5 ops/day	Unit Economics (Estimate)
		20 mins/op	
		€3/10 mins	

Source: 44. (Electric Ground Support Equipment at Airports | European Alternative Fuels Observatory, n.d.)

Vertical 3: Car Sharing

Calculations in detail

Market	Formula	Calculation
TAM	Car-sharing vehicles (EU + US) ^{56 57} x €5616 / vehicle / year	TAM = 200,000 x 5,616 ≈ 1.12billion / yr.
SAM	Car-sharing vehicles (EU) ⁵⁶ x €5616 / vehicle / year	SAM = 176,000 x €5616 ≈ €988 M/yr.
SOM	Car-sharing vehicles (DE) ⁵⁵ x 10% x €5616 / vehicle / year	SOM ≈ 53000 x €5616 x 0.1 ≈ €29.7 M/yr.

Key Information	Content	Definition
Key Data	≈ 2700 ¹⁰	Cambio has roughly 2700 car-sharing vehicles.
	10% market share in 2028	Assume Vay partners with two car-sharing companies in 2028, roughly 5400 (2700*2) vehicles.
Key Assumption	15 trip/vehicle/week 6 km/trip €1.2 per km	Revenue per vehicle per year ≈ 15 x 6 x 1.2 x 52 (week) = €5,616

Source: 10. (Erfolgreiches CarSharing-Jahr 2024 Cambio, 2025); 55. (Bundesverband CarSharing e.V, 2020); 56. (INVERS GmbH, 2025, February 20); 57. (invers.com, 2024)

Calculations in Detail (1/3)

3-Year Financial Estimation

	2025/2026	2027	2028
# Vehicles equipped	40 → 42 e-vehicles operated by cambio in Aachen at the moment ⁸	300 → Assuming 60-120 equipped cars for each of the 3 cities	1300 → Assuming 80+ equipped cars for each city
Trips per vehicle per week	7	12 → Study indicates 1,8 trips per car on average per day in german cities ⁵³	15
Average distance(km) per trip	3 → Assuming a lower average trip distance in Aachen compared to the findings in the study for bigger cities. Looking at maps, reasonable trip distnaces range from 2km-4km	5 → Study showed average trip of free-floating car sharing in Berlin and Munich to be 5-7km ⁶	6
Average revenue per km	0,90 € → The actual pricing is going to be around 50% higher, i.e. the rest goes to cambio. This number displays the price per km that vay will charge on ist side for tele-operated car rides	1,10 € → Increase due to rising operational costs (inflation,..) and profit optimization	1,20 € → Increase due to rising operational costs (inflation,..) and profit optimization
Fixed technology licencing fee per vehicle	800,00 € → Assumption on fixed technology and hardware licensing fees per vehicle per year. Initial hardware set-up costs are equalized after 2 years	900,00 €	900,00 €
Cities in operation	1	3	10

Calculations in Detail (2/3)

3-Year Financial Estimation

	2025/2026	2027	2028
# Teledrivers	2 → Vehicles × Trips/week × Distance × 3 min per km ÷ 60 ÷ Teledriver working hours per week	11 → Vehicles × Trips/week × Distance × 3 min per km ÷ 60 ÷ Teledriver working hours per week	40 → Vehicles × Trips/week × Distance × 3 min per km ÷ 60 ÷ Teledriver working hours per week
Average hourly cost per teledriver	18,00 €	19,00 €	21,00 €
Tele-driver utilization (hours/week)	40	40	40
Hardware setup costs per vehicle (sensors, cameras,...)	1.300,00 € → Due to the presence of a teledriver, the system does not need expensive LiDAR sensors or sophisticated mapping efforts ^{7;19} → 1,000 to 1,500 Euros	1.100,00 € → Decreasing hardware setup costs thanks to scaling and technological advancements	1.000,00 € → Decreasing hardware setup costs thanks to scaling and technological advancements
Hardware Maintenance per vehicle	80,00 € → Minimal efforts to maintain sensors and cameras. Costs only occur for updates or rare malfunctions ^{7;19}	90,00 € → Slightly increasing because of rising wages	100,00 € → Slightly increasing because of rising wages

Calculations in Detail (3/3)

3-Year Financial Estimation

	2023	2024	2025	2026	2027	2028
B2C	859.000€ ¹⁸	3.519.000€ ¹⁸	10.727.010€	21.713.141€	32.831.963€	41.238.226€
B2B (Cambio)	X	X	X	73.312€	1.314.600€	8.535.800€

Assume: B2C Revenue growth rate slows down by 50% each year

Year	2023-2024	2024-2025	2025-2026	2026-2027	2027-2028
Revenue Growth %	410% ¹⁸	205%	102%	51%	26%
